

Microsoft Windows Explorer Integration:

Similar to the SharePoint integration into your CRM you are now also able to integrate the Microsoft Windows Explorer. With this functionality you can organize your documents and create relationships between files on the hard disk and your account,contact,.., customizable entity

As you see in the below screenshot you can directly drag&drop files from your hard disk to an account,contact,.., customizable entity..

Access the documents without MS CRM

Also for people who do not have access to MS CRM it is possible to reach the documents associated to a specific entity. As you can see in the screenshot below we create a folder structure so that you can avoid CRM to find the documents.
