1. General

AttachmentExtractor offers you a service based tool to move attachments from within your CRM 2011 to either a Sharepoint location or a fileshare, saving precious database space on the CRM 2011 and enabling various indexing & search options via Sharepoint and Microsofts Search Server functionality.

AttachmentExtractor is able to connect to any Microsoft Dynamics CRM 2011 (onPremise, online and hosted), and offers extracting email and note attachments, as well as extracting the email and note item itself for indexing its contents (both email and note descriptions are NOT changed, just replicated to an indexable file).

2. Trial Mode Restrictions

In trial mode the service will stop after each processed batch of items. The processing batch size is limited to 25 items per cycle and a maximum of 5000 Items is supported in total.

3. Detailed functionality

Attachment Extractor will install a separate Service for each configured Organization.

AttachmentExtractor requires the „url“ extension to be allowed in CRM. During setup, AttachmentExtractor modifies the blocked extensions List in CRM to allow „url“.
(This setting can be found in the system settings of your CRM Organisation)

Each service will be listed in the Windows Service overview separately (See section 9, Additional information for a sample screenshot)

The Services **cannot** be started directly from the servicemanagement, but need to be launched via the ServiceManagement Application, which is installed with the product.

AttachmentExtractor creates a new application log named www.mscrm-addons.com where statusinformation, errors and batchprocess summaries are logged. This is independent of the extended logging features available in the service configuration panel.

Batches are processed every 100 seconds.

With every batch processed, AttachmentExtractor analyses the emails and/or notes, saves the attachment to the configured location (FileShare or SharePoint) and then replaces the existing attachment with a url-file pointing to the new location. The new attachment is usually less than 500 bytes in size.

In addition the email or annotation item can be saved itself to allow indexing and searching in the actual entities description fields. If you choose to index those entities, the file saved to the external location will also contain some meta information, as for example with an email the subject, from, to, cc and bcc are also saved into the content file.

If you are using a sharepoint save location, additional attributes will be created with the documents

- **CrmBackLink**
Containing a link to the actual CRM item
- **EntityGuid**
The unique ID of the item
- **EntityTypeName**
The name of the Entity in CRM
- **IsCrmRecord**
Indicating if this item is an actual CRM record, or an attachment
- **LinkGuid**
Containing the GUID and TypeName as a csv list for the attributes specified below
- **LinkData**
Containing the display values for the attributes specified below
- **EntityDate**
The createdon date of the item in CRM

A comma separated list of the following items is saved into the Sharepoint Attributes. The Attributes are separated by a semicolon:

For Email:

"from", "to", "cc", "bcc", "subject", "regardingobjectid"

For Annotation (Note):

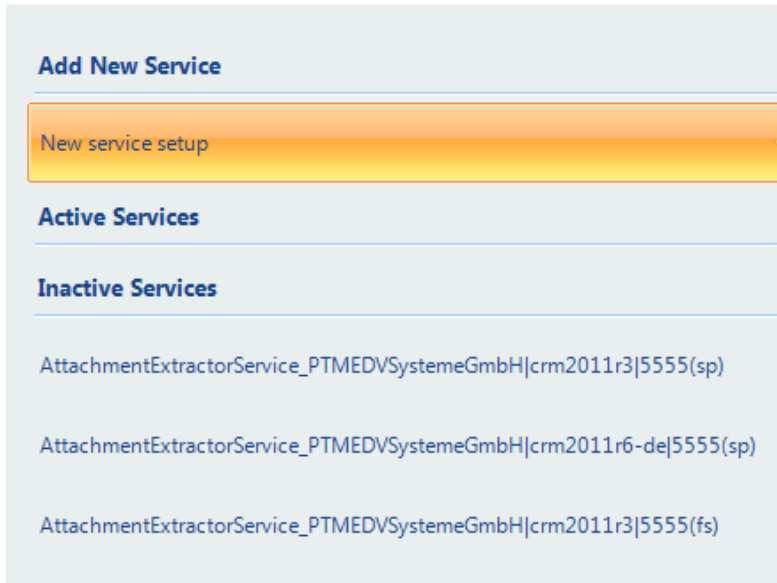

"subject", "filename", "filesize", "notetext", "objectid"

Please note, that the attributes are set for both the attachments and the actual entity.

The Attachment Extractor creates a weekly subfolder, based on the createdon date of an item:

4. Overview - ServiceManagement

Add New Service

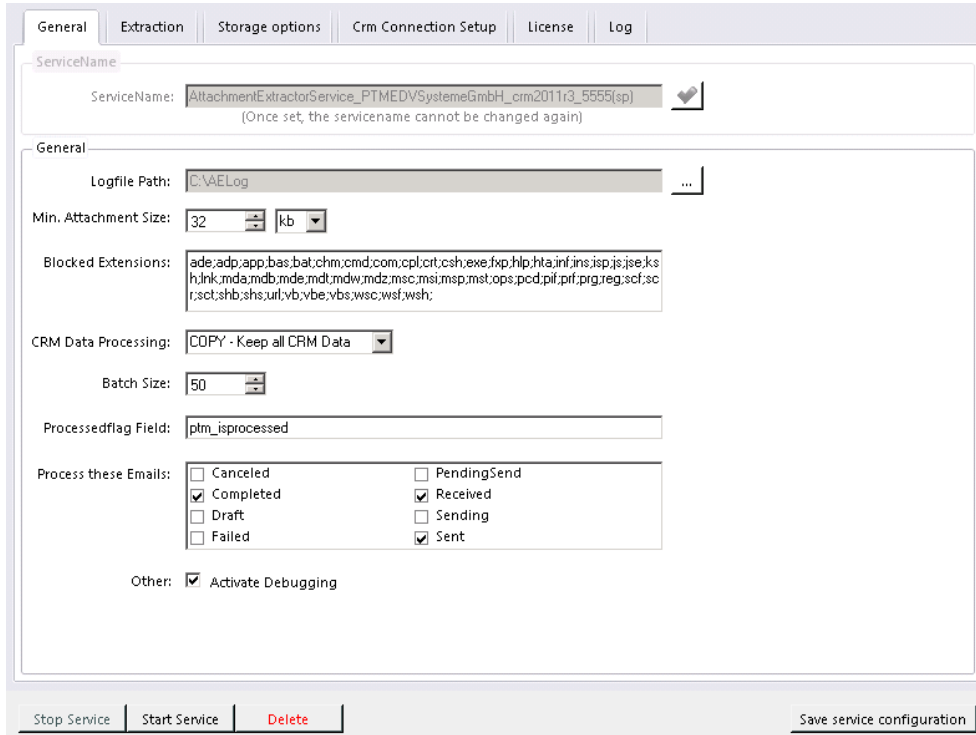

- **New service setup:** Start here to create a new Service

When creating a new service, you need to give it a descriptive service name, that name cannot be changed once set.

Active Services: A list of all running services

Inactive Services: A list of all inactive services

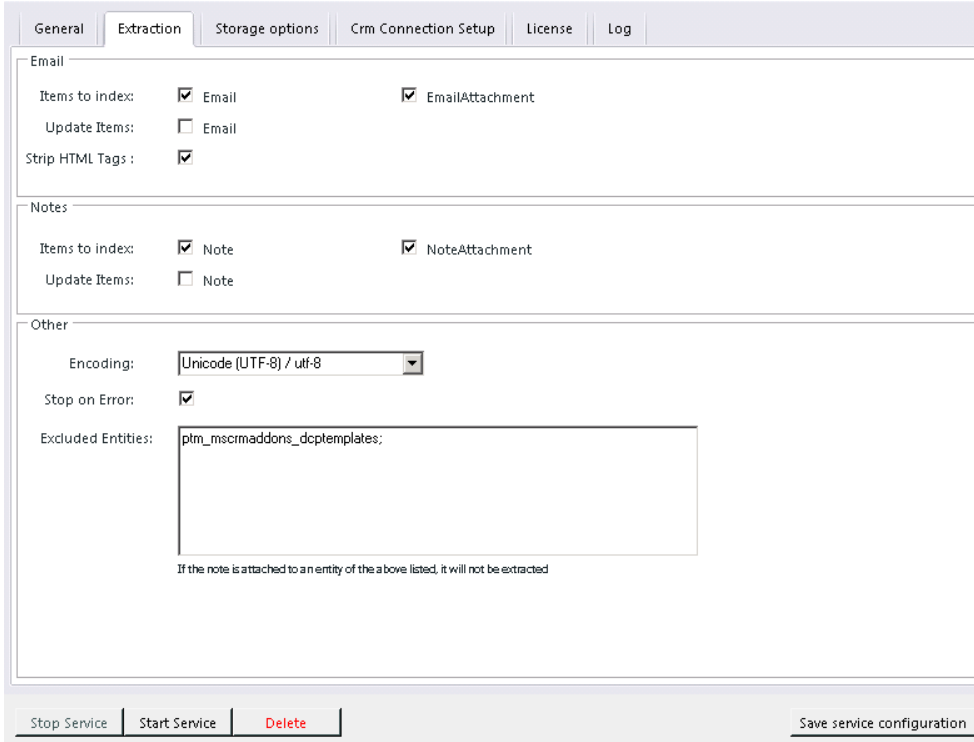

5. Configuration of a Service

The screenshot shows the configuration window for a service. The 'General' tab is selected. The 'ServiceName' field contains 'AttachmentExtractorService_PTMEDVSystemeGmbH_crm2011r3_5555(sp)' with a note '(Once set, the servicename cannot be changed again)'. The 'Logfile Path' is 'C:\AELog'. 'Min. Attachment Size' is set to 32 kb. 'Blocked Extensions' lists various file types like .ade, .adp, .app, etc. 'CRM Data Processing' is set to 'COPY - Keep all CRM Data'. 'Batch Size' is 50. 'Processedflag Field' is 'ptm_isprocessed'. Under 'Process these Emails', 'Completed', 'Received', and 'Sent' are checked. 'Other' has 'Activate Debugging' checked. At the bottom, there are buttons for 'Stop Service', 'Start Service', 'Delete', and 'Save service configuration'.

- **Logfile Path:** The Path where the extended logging for this service is saved
- **Min. Attachment Size:** The minimum file size for an attachment to be extracted
- **Blocked Extensions:** defines the files, that will be rejected due to their extension
- **CRM Data Processing:** Select to MOVE or COPY your CRM data. Attention! A move of data cannot be undone.
- **Batch Size:** Number of items to be processed per step
- **Format:**
 - Strip HTML Tags : Tries to remove the HTML tags from an email body
 - Encoding : Option to change encoding. ATTENTION! The encoding must be supported by your search method, if you want to search inside the files extracted.
- **Process these Emails:** Select the states an email can have to be processed.
- **Other:**
 - Activate debugging : Enable extended logging

6. Extraction

- **Email & Notes : Items to Index:**

Selecting Email or Note will extract the Email/Note body and save it as a File.

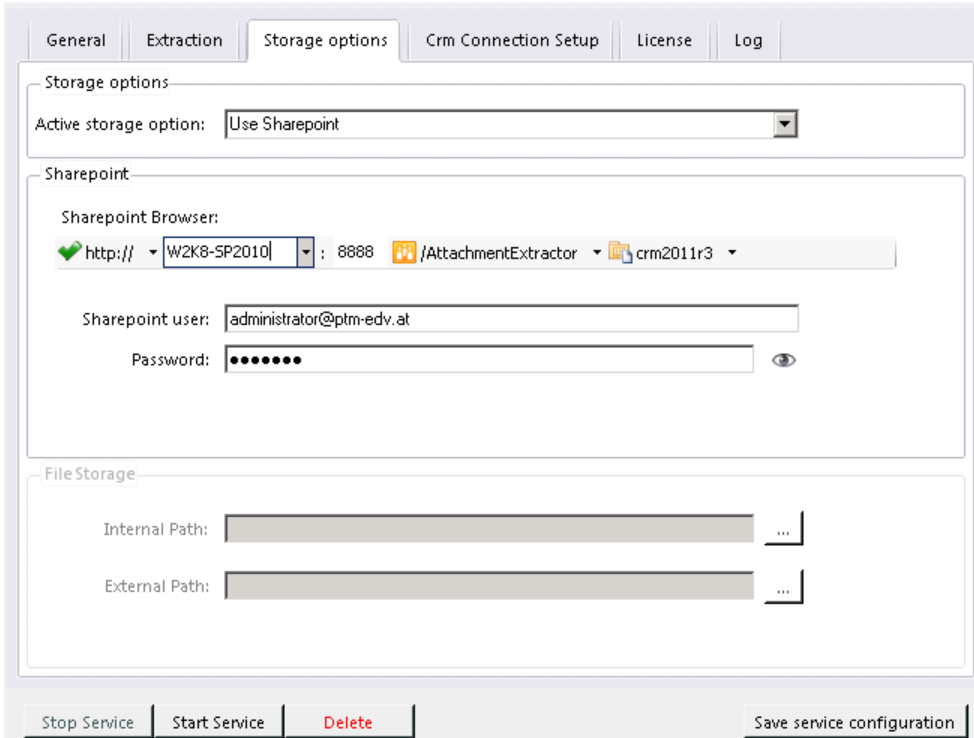

Selecting EmailAttachment or NoteAttachment does process the attachment ONLY

Update Items updates existing Email/Note files.

- **Other**

- Encoding specifies the encoding of the text files. Make sure its compatible with any further processing like Microsoft Search Server
- Stop on Error : The service will also shut down on non-critical errors.
- Excluded Entities : Contains a list of entities, which notes will not be processed by the Extraction.

7. Storage Options

The screenshot shows the 'Storage options' tab in the application's configuration window. It includes the following sections:

- Storage options:** A dropdown menu set to 'Use Sharepoint'.
- Sharepoint:**
 - Sharepoint Browser:** A browser address bar showing 'http://W2K8-SP2010 : 8888 /AttachmentExtractor /crm2011r3'.
 - Sharepoint user:** A text field containing 'administrator@ptm-edv.at'.
 - Password:** A text field with masked characters and an eye icon to toggle visibility.
- File Storage:**
 - Internal Path:** A text field with a browse button ('...').
 - External Path:** A text field with a browse button ('...').

At the bottom, there are buttons for 'Stop Service', 'Start Service', 'Delete', and 'Save service configuration'.

Active Storage: Select, if you want to use SharePoint or a Fileshare

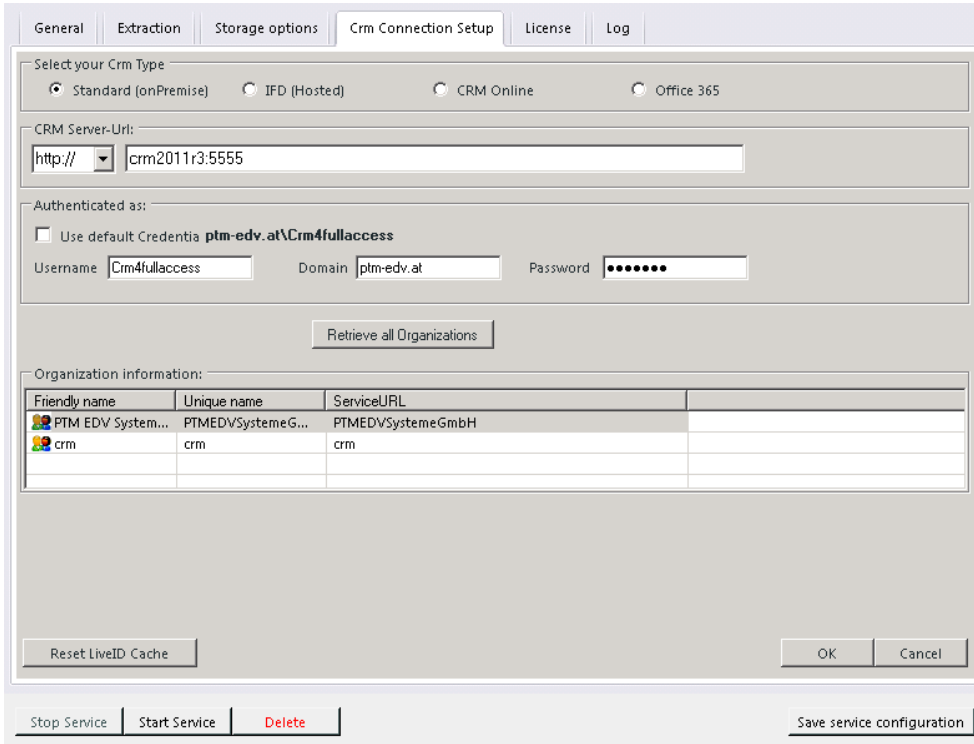

SharePoint

- **SharePoint Navigation:** Enter your sharepoint server and port or select from the dropdown list. Browse through your sites and Libraries to specify the storage location. You MUST select a library.
- **SharePoint User:** The Username of the SharePoint User
- **Password:** The Password of the SharePoint User (Click on the Eye to see your Password unencrypted)

File Storage

- **Internal Path:** Choose the local Path of the Storage (e.g.: C:\AE\Files)
- **External Path:** Choose the external Path of the Storage, as it would be accessed by the users ([\\fileservr\AE\Files](#))

8. CRM-Connection Setup

Select your Crm Type

Standard (onPremise)
 IFD (Hosted)
 CRM Online
 Office 365

CRM Server-Url:

http://

Authenticated as:

Use default Credentia **ptm-edv.at\Crm4fullaccess**

Username
 Domain
 Password

Organization information:

| Friendly name | Unique name | ServiceURL |
|---|-------------------|-------------------|
|  PTM EDV System... | PTMEDVSystemeG... | PTMEDVSystemeGmbH |
|  crm | crm | crm |

- **CRM Server-Url:** Url of the CRM-Server you want to use
- **Authenticated as:** Decide if you want to use default Credentials (not recommended, as the service is run as Networkservice and that user usually doesn't have CRM access) or if you want to log on with other credentials (always use administrator)
- **Retrieve all Organizations:** Get all Organizations from the selected CRM-Server
- **Organization information:** Friendly name, unique name and ServiceURL of each Organization

9. License

General | Extraction | Storage options | Crm Connection Setup | **License** | Log

| General license information | | | | |
|-----------------------------|--------------|-------------|--|--------|
| Licenseinformation | LicenseValue | Systemvalue | | Status |
| ▶ Licensemodel | | | | |
| Licensekey (Trial) | Trialkey | | | |

| License validation information | | | | |
|--------------------------------|--------------------------------|--|--|--------|
| Licenseinformation | Systemvalue | | | Status |
| BusinessUnit | PTMEDVSystemeGmbH | | | |
| Number of site licenses | 28 | | | |
| Licenses for Readonly Users | 0 | | | |
| Expiration | 30.05.2012 18:37:11 (Expired) | | | |
| Support | | | | |
| ▶ Issued product | AttachmentExtractor | | | |
| Version upgrade covered till | 01.01.0001 00:00:00 | | | |

| License Summary | | | | |
|--------------------|--------------|-------------|--|--------|
| Licenseinformation | LicenseValue | Systemvalue | | Status |
| ▶ LicenseState | | invalid | | |

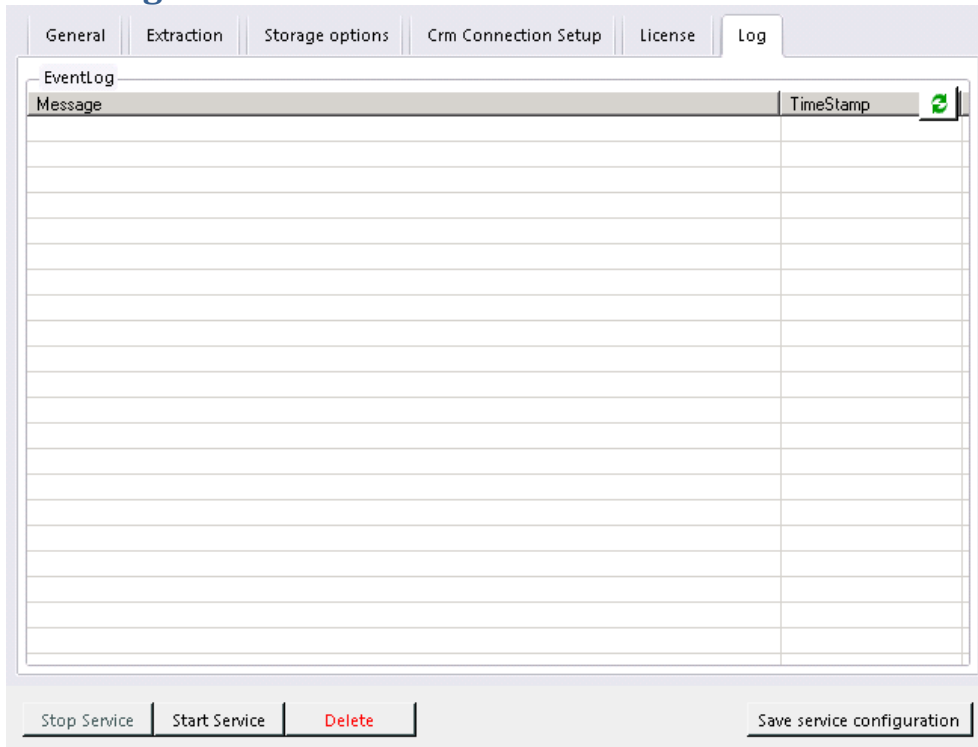

Trial version has expired

Stop Service | Start Service | **Delete** | | Save service configuration

This overview is enabling you to quickly check your license state. If the license is invalid, the service will not start.

While in Trial mode (as seen in the screenshot), the service will terminate after each batch and only work through a maximum of 5000 items total. After reaching that margin, it will stop completely.

10. Log

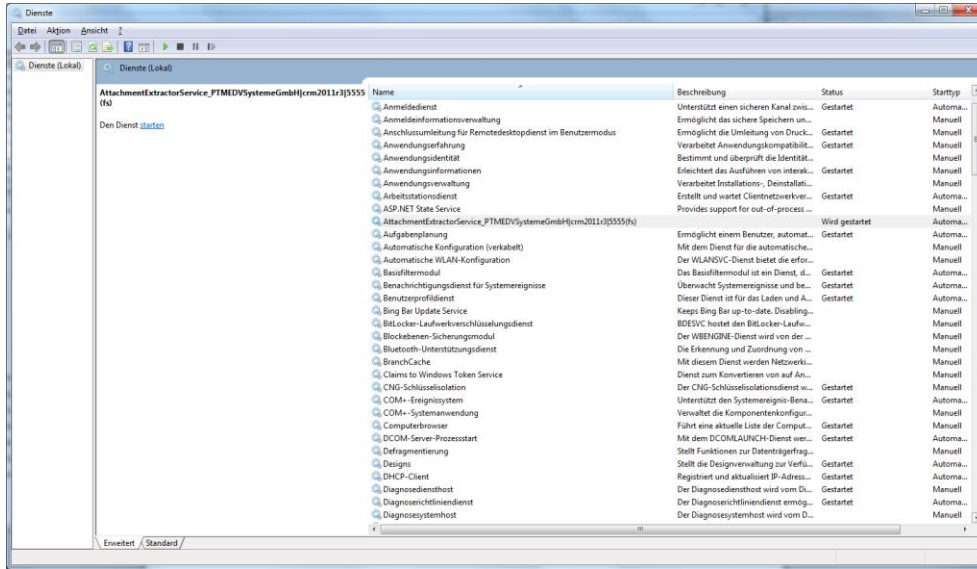

The screenshot shows the 'Log' tab of the software. At the top, there are several tabs: 'General', 'Extraction', 'Storage options', 'Crm Connection Setup', 'License', and 'Log'. The 'Log' tab is selected. Below the tabs is a window titled 'EventLog'. Inside this window is a table with two columns: 'Message' and 'TimeStamp'. The table is currently empty. At the bottom of the window, there are four buttons: 'Stop Service', 'Start Service', 'Delete', and 'Save service configuration'.

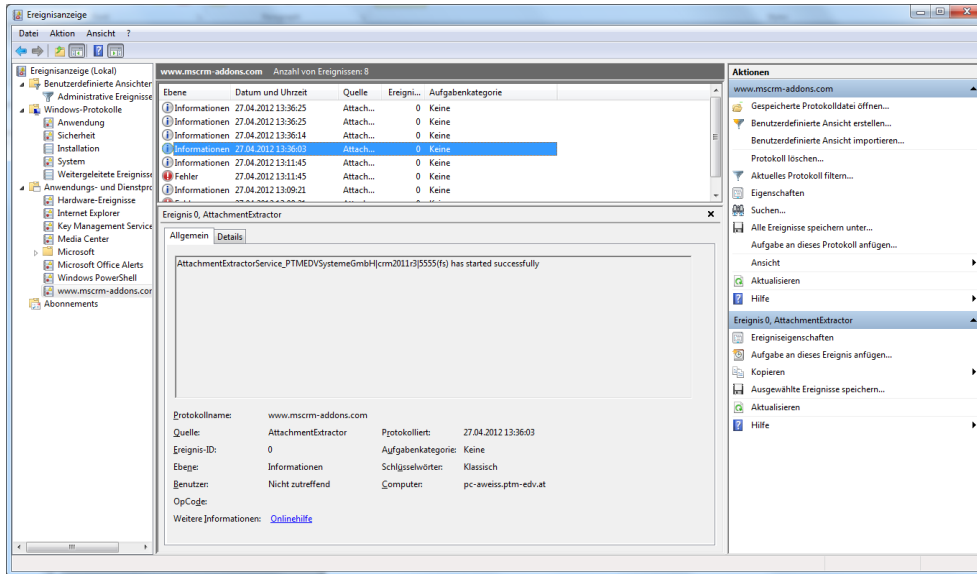

The log provides an excerpt of the AttachmentExtractors eventlog, filtered for this specific service. This helps you to identify any issues with the service.

Double clicking on an entry in the list brings up the full description in a messagebox.

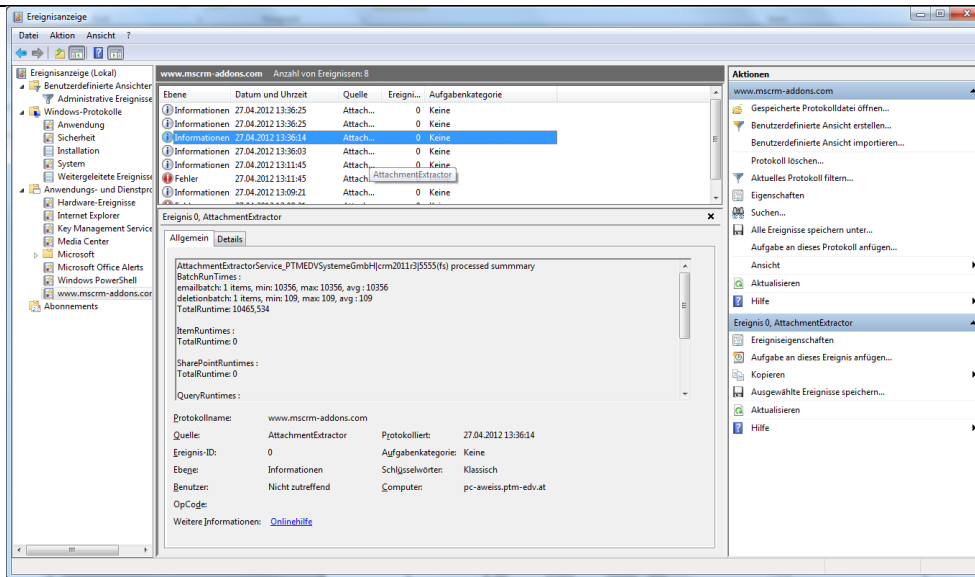

11. Additional Information

The services panel allows you to check the service status. You can only stop the services from here, but NOT start them anew.

The eventviewer is showing key events for each service.

The screenshot shows the Windows Event Viewer window titled 'Ereignisanzeige'. The left pane shows the event log hierarchy, with 'Anwendungs- und Dienstprotokolle' expanded to 'www.mscrm-addons.com'. The main pane displays a list of events with columns for 'Ebene', 'Datum und Uhrzeit', 'Quelle', 'Ereignis-ID', and 'Aufgabenkategorie'. One event is selected, and its details are shown in the lower pane.

| Ebene | Datum und Uhrzeit | Quelle | Ereignis-ID | Aufgabenkategorie |
|---------------|---------------------|-----------|---------------------|-------------------|
| Informationen | 27.04.2012 13:36:25 | Attach... | 0 | Keine |
| Informationen | 27.04.2012 13:36:25 | Attach... | 0 | Keine |
| Informationen | 27.04.2012 13:36:14 | Attach... | 0 | Keine |
| Informationen | 27.04.2012 13:36:03 | Attach... | 0 | Keine |
| Informationen | 27.04.2012 13:31:45 | Attach... | 0 | Keine |
| Fehler | 27.04.2012 13:11:45 | Attach... | AttachmentExtractor | |
| Informationen | 27.04.2012 13:09:21 | Attach... | 0 | Keine |

The details pane for the selected event shows the following information:

```
