

AttachmentExtractor

for MS Dynamics CRM 2011

mscrm-addons.com
Your company for MS-CRM ADD-ONS!

AttachmentExtractor is a service based tool to move attachments from within your CRM 2011 system to either a SharePoint location or a file share, saving precious database space on the CRM 2011 and enabling various indexing & search options via SharePoint and Microsoft Search Server functionality.

Main functionalities:

Replication and extraction of attachments

Extraction or replication of email and note attachments to a SharePoint or file share. If extracted, the attachment is replaced with a link to the file on the chosen file storage (see picture).

Comparing annual cloud storage costs of about 50GB reveals a huge difference between CRM-Online (~ 6.000 \$) and SharePoint-Online (~120 \$).

Therefore, expensive CRM-online data storage costs can be saved by switching to alternate storage options with the AttachmentExtractor.

Indexation and search features

Next to the attachment, it is possible to replicate email- and note-content for indexing purposes. If the extracted file is saved on a SharePoint, it can be indexed and therefore be searched by MS Search Server functionality easily.

INFO: When using the PowerSearch addon, it is possible to perform a full text index search on the content and attachments of notes and emails directly within CRM.

Configuration

The CRM internal "AttachmentExtractor Settings" – dialog provides an easy option to configure extraction-parameters, storage options and the CRM- connection.

Availability

- MS Dynamics CRM 2011 On-Premise (RTM) / Hosted (IFD) / Online

Licensing (Prices exclusive of VAT)
