CHALLENGES

With form-heavy processes being part of daily business, HRK LUNIS managed documents manually in Microsoft Word, requiring employees to **enter customer information into forms and then re-enter the same data into the CRM system**. This two-step process not only caused **frequent disruptions** and **increased the risk of errors**, but also consumed a considerable amount of time and resources - slowing down internal workflows and reducing overall efficiency.

SOLUTION

With the introduction of DocumentsCorePack (DCP), HRK LUNIS was able to **fully digitize its document workflows** - from creation to signature. A key requirement was the ability to **send documents directly from Dynamics 365 to DocuSign via DCP**. This eliminated the need for manual exports, email attachments, or switching between systems.

01 ▶ Streamlined E-Signature Processes

Documents can now be generated in Dynamics 365 with a **single click**, **automatically** pre-filled with CRM data, and sent directly to **DocuSign** for electronic signature. The use of Advanced Signatures ensures **legal compliance** and meets regulatory requirements.

02▶ All in One Flow

Once signed, documents are automatically saved to the relevant record, ensuring a **secure and fully traceable process**. Complex documents can be created, digitally signed, and stored in the correct SharePoint location - all directly within Dynamics 365. This seamless automation saves time and paper while **significantly improving efficiency, accuracy, and traceability**.

CONCLUSION

By implementing DocumentsCorePack, HRK LUNIS has **successfully automated and streamlined its entire document lifecycle** within Dynamics 365. The elimination of manual data entry and the seamless integration with DocuSign have not only accelerated workflows but also **improved data accuracy and compliance**. This solution saves valuable time and resources while enhancing traceability and security - empowering HRK LUNIS to focus more on their core business and less on administrative tasks.
