SECURAI

Acknowledgment

Securai GmbH hereby confirms that an application-level penetration test has been conducted for the following application:

MSCRM Addons deployed on 20.10.2025

This application is developed by:

PTM EDV Systeme GmbH

Bahnhofgürtel 59

A-8020 Graz

The application was analyzed from October 20, 2025 to October 31, 2025. All identified vulnerabilities were documented in the report dated November 4, 2025.

The application was tested for the presence of the OWASP Top Ten as well as the OWASP API Security Top Ten. The tests focused, among other things, on:

- Access to data without the required permissions

- Injection of database or operating system commands

- Manipulation of content (XSS)

- Ensuring proper authentication and session management

- Detecting misconfigurations and other leaks that could lead to the disclosure of confidential information

- Use of outdated software at the application level (e.g., JavaScript libraries)

- Improvements related to securing the application against future attack vectors

- Other specific web vulnerabilities (CSRF, open redirection)

In addition, an extended vulnerability scan was performed on the productive IP addresses of the application server to identify security weaknesses and misconfigurations in the server

All tests were performed and verified manually by Reimar Fritz.
