

AttachmentExtractor

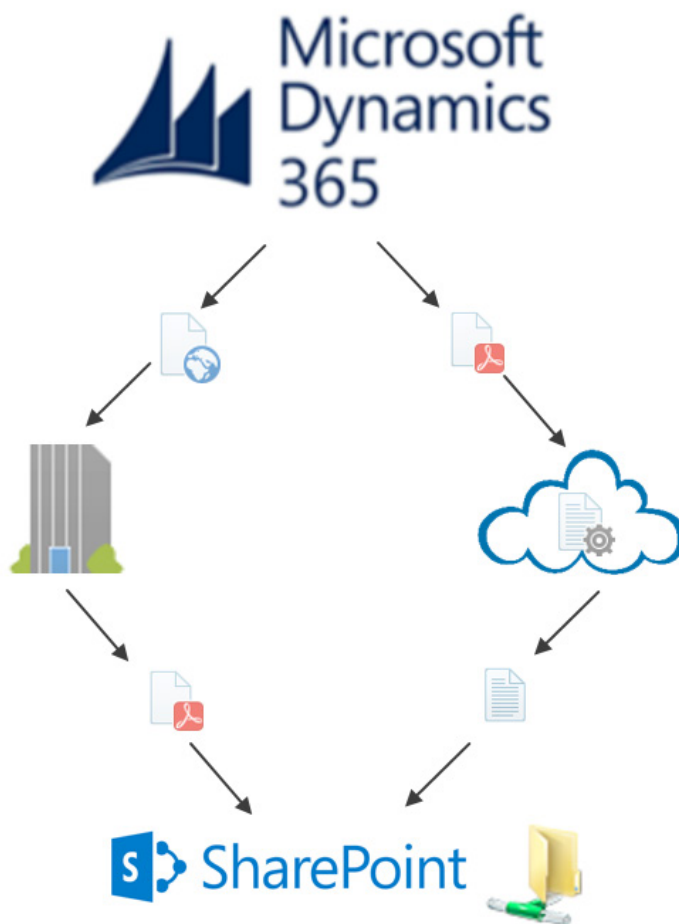

for Microsoft Dynamics 365

AttachmentExtractor moves attachments from within Dynamics 365 to either a SharePoint location or a fileshare. Therefore, it helps to save precious database space in 365. Furthermore, the addon enables various indexing & search options via SharePoint and the Microsoft Search Server functionality.

How it works

- Extraction of attachments and documents from Dynamics 365 to SharePoint
- Replication of data and sensitive documents
- Reduce cost of online storage - Dynamics 365 vs. SharePoint
- Look & Feel: No difference for Dynamics 365 users
- Indexation and search features
